About Me

Building Beyond the Syllabus

I'm Aadhil Nandan, a B.Tech Computer Science student at Jyothi Engineering College with an insatiable curiosity for technology. My passion isn't just learning; it's **applying**.

While my foundation is in core computer science, my real education comes from building ambitious, real-world projects. I thrive on the entire technology spectrum—from architecting robust Python backends to exploring the new frontiers of artificial intelligence.

My work is driven by a belief that great design isn't just what you see—it's how it feels when it moves. [cite: 15]
